DETAILED ACTION

Election/Restriction

Applicant's election of the acid-blocked product of Example 3, without traverse, as the species (actually 2) elected to begin prosecution is acknowledged. The election/restriction is hereby made FINAL.

Claim Objections

Claim 2 is objected to because of the following informalities: the claim does not end with a period (after the structure). Claims must begin with a capital letter and end with a period. MPEP 608.01(m). Appropriate correction is required.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 1621

The elected species was searched and was not deemed free of the prior art- that prior art being parent application 10/385,576. This being the only apparently relevant art, the search was expanded as called for under current Office Markush practice, a compound-by-compound search. This resulted in all remaining species being searched.

Claims 1-19 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-17 of copending Application No. 10/385,576 in view of US 5,489,618. This is a <u>provisional</u> obviousness-type double patenting rejection.

The instant set of compounds when R≠H is simply the set of acid addition salts (i.e. the "acid-blocked" salts) of the corresponding set of amine catalysts claimed in application 10/385,576. However, it is well known in the catalytic polyurethane arts that the addition of carboxylic acids to amines active as catalysts in these arts results in useful delayed-action catalysts. This is evidenced by, for instance, US 5,489,618 where this is explicitly stated (column 3 line 32) as common knowledge in the industry.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to make the acid addition salts of any amine catalyst useful in the polyurethane arts in the anticipation of making useful delayed-action catalysts.

Art Unit: 1621

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: US 4,296,231 and US 6,525,107 B1 are cited to show related catalysts.
